## How to change a drive belt on a husqvarna zero turn riding mower

How to Replace a Husqvarna Zero-Turn Riding Mower Click to see full answer. Also asked, how do you change a belt on a Ferris lawn mower? PRY BELTS OVER PULLEYS. Park the tractor on a smooth, level surface such. Lower the mower deck to its lowest cutting. Using a 1/2" breaker bar, place the square end. Slide the drive belt over the edge of the stationary. Remove the old belt and replace with a new one. Install the drive belt on the PTO pulley, the spindle. One may also ask, how do you tighten the belt on a Husqvarna lawn mower? How to Adjust the Belt on the Husqvarna YTH20K46 Turn on the mower via the ignition switch located in the lower-right-hand corner of the panel just below the steering wheel. Press the parking brake pedal located on the left side footrest. To set the parking brake, push down hard on the brake pedal. Locate the log lever extending from the top of the control panel. Accordingly, how does the belt go on a Husqvarna riding mower? Place the new belt in the belt path around the outside of the two largest outer pulleys. Thread the belt forward so it goes between the outer and inner sets of pulleys and comes out between the two inner pulleys. Pull the looped end of the belt around the electric clutch pulley if you did not remove the mower deck. How do you tighten the belt on a riding lawn mower? How to Tighten a Riding Lawnmower Belt Turn off the engine of your lawnmower and disconnect the spark plug wire as well. Locate the main frame tube on your lawnmower. Locate the belt, also known as the drive belt, inside the deck of your lawnmower. Tighten the belt of your lawnmower by shortening the location of the main frame inside the clamps. One of the major components on your mower, which requires frequent checks and maintenance, is your drive belt. If you ensure that you pay proper attention and care to this, it will guarantee the long term durability of your mower. It would also improve how efficient your mower's overall performance is. And we say this from numerous personal experiences. Changing the drive belt may sound difficult. You get easily dissuaded. Reading manuals sometimes feel like reading a lengthy "Terms and Conditions" page, but it is necessary, to say the least. And if you're like me with an appetite to get things done, by yourself, or merely under necessity with no other options, then this straightforward, concise how-to guide on replacing and maintaining the drive belt on your zero turn mower is just for you. Replacing Your Husqvarna Zero Turn Mower Drive Belt: Step by Step Guide Replacing Your Husqvarna Zero Turn Mower Drive Belt: Step by Step Guide Step 1: Set Parking Brakes To remove your drive belt; first, you must not only ensure that your parking brake is on, but also that your mower itself is parked on a leveled surface with no inclination that may cause sudden movements. Step 2: Bolts The next step is to remove the bolts from the belt shield, which is the casing in which the driving belt is enclosed. Removing the bolts should ensure the casing comes off easily. Step 3: Belt Configuration Once the casing comes off, you should see the drive belt and, most importantly, mentally note how it is routed and configured so that you may have a perfect guide once it's time to replace it. You may also go a step further from a mental picture by taking an actual picture for better reference. Step 4: Removing the Belt To remove the belt, you must first move the idler arm to ensure looseness and then go ahead and remove the belt by gently pushing it over the top of the housing pulleys. Step 5: Replacing the Belt – Wrapping the Pulleys Once you're done with the cleaning, maintenance, or total replacement of the belt, proceed to open the engine shaft again and then wrap the deck belt around the clutch pulley just as it was your earlier and in your picture. Step 6: Idler Arms Push in on the idler arm that was moved earlier (to ensure looseness) and once you're done routing the belt, release the idler arm to its natural position to ensure fastening. Step 7: Final Check Confirm to see if your final routing configuration is the same as it was earlier in your picture. Make sure there aren't any knots or hard twists on the belt. Step 8: Replace Encasing Carefully replace the encasement removed earlier on the belt housing and make sure the major bolt spaces fall on the right surfaces. Step 9: Replace Bolts Replace and fasten the bolts on the drive shield casing. And You're Done. Check out this video below for a more in-depth how-to. How to Replace the Drive Belt on Husqvarna Zero Turn Riding Lawn mower We hope you enjoyed our guide on how to replace the drive belt in your Husqvarna Zero Turn Mower. Feel free to leave comments below on your success and the challenges you faced below. What does a drive belt do on a lawnmower? No matter how lawn mower is operated, they all have a belt that runs from the drive wheels to the engine. The belt is used to transfer power from the engine to the wheels, and when the belt is not tight, the mower will not move forward or backward as it should. Why does my deck belt keep breaking? The most common cause of the deck belt breaking would be an idler or mandrel pulley not lined up properly or the bearings going out and making the pulley wobble, or the belt is getting rubbed somewhere. Check the pulleys on the deck to make sure they turn freely and are not loose and wobbling around. What causes a mower deck to vibrate? If the mower vibrates when you engage the cutting blades, there might be a problem with the blade drive system. Deck vibration can be caused by an unbalanced blade, worn pulley or mandrel, bad blade belt, or debris caught inside a pulley. Loose nuts or bolts on the pulleys, mandrels, or blades can also cause vibration. Why does my lawnmower keep throwing the belt? A retaining bolt for the pulley has come loose, or you have bad bearings. Make sure all pulleys are still rotating smoothly. If one has bearings that have gone south, the pulley could be cocked, which will throw the belt. So, check the spindle bearings and check the tensioner pulley and the idler pulley if it has one. How do you adjust a tensioner pulley? Turn the adjustment bolt on the side, top, or bottom of the pulley counterclockwise with the ratchet and socket until the accessory belt is loose enough to remove. Tighten the tensioner pulley by turning the adjustment bolt clockwise with the ratchet and socket until the belt is tight. Rob started his passion for lawn care before he was 10 years old when we would regularly help his grandfather tend to his yard in Jupiter, FL which got him involved with learning all about St. Augustine and Floratam grasses. Before beginning, put on your work gloves and disconnect the spark plug wires. Also, make sure that the parking brakes are into action. These safety measures are extremely important that is why we consider them to be written in step one. Disconnecting the spark plugs will ensure that the mower will not turn on while you are working with it. The parking brakes do not allow the mower to move on itself whenever you push the deck. Pull the mower deck to the lowest possible height and remove the cover of the left pulley. Now, push the blade belt idler pulley and roll the drive belt that is covering the left blade pulley. Further, you have to slip under the back of the mower in order to remove the blade drive belt that is attached to the electric clutch. Step 3: Pull Out the Mower Deck Once you have removed the blade drive belt, you have to take out the mower deck from the mower. For doing so, detach the mower deck mounting pins and hanging brackets. Push the deck and release it from the front bracket. Push the deck from its back so that it can easily come out of the mower. Step 4: Take Out the Flywheel Nut Unplug the harness of the electric clutch and remove the mounting screws of the flywheel cover. Pull the cover off so that you can reach the flywheel nut. Rotate the nut in order to take it out. Ask help from someone to hold the flywheel nut stationary so that you can work to remove the mounting bolts. Step 5: Disconnect the Electric Clutch Once you have taken out the flywheel nut, disconnect the electric clutch from the engine crankshaft. Push the driver seat upwards and roll the ground belt from the engine pulley. After doing this, you have to disconnect the ground drive belt that is attached to the transmission pulleys. Once the belt is completely detached, pull it out of the mower. Step 7: Attach the New Drive Belt Install the new drive belt and ask your helper to hold the idler pulley bracket so that you can easily attach the belt on the engine pulley. Once the new drive belt is installed, lower down the driver seat. Step 8: Reconnect the Electric Clutch For the reinstallation of the electric clutch, you have to align the slot of the engine pulley with the key that is located inside the engine shaft. Step 9: Put the Flywheel Nut Back Connect the flywheel nut and attach the flywheel cover that you removed in the beginning. Also, connect the engine clutch with the harness. Step 10: Attach the Mower Deck After completion of this, it's time to connect the mower deck with the mower. For doing so, keep the mower deck under its frame and connect it with the front bracket. Precisely, connect the hanging brackets, and don't forget to put the mounting pins back as they are very important to hold the deck on its position. Step 11: Attach the Blade Drive Belt Put the blade drive belt back on the electric clutch that you rolled initially. Properly roll it on the left blade pulley and push the idler pulley inwards. Step 12: Connect the Spark Plugs Once everything is reinstalled and reattached, connect the spark plugs, and you are done!
